

# Safe method: Soda Guns

## Cleaning effectively

- Wash hands in warm soapy water and thoroughly dry before working on dispense equipment.
- Remove the nozzle from the gun. If it is difficult to remove, soak the soda bar gun in a clean container of carbonated water for 5 minutes. If still cannot remove please your soft drinks supplier for assistance to ensure equipment is not damaged.
- Take a cleaning brush and clean in and all around the nozzle with the brush to remove any syrup build up.
- Soak the nozzle and gun in the sanitising solution for no longer than 20 minutes or in accordance with manufacturer's recommendations.
- Rinse the nozzle in clean water as per the instructions given by the sanitiser producer, air dry and reattach the nozzle.
- Wipe all the outside surfaces with sanitizer and a clean cloth wipe (or sanitizer wipes). Include buttons, handle and nozzle. (Use bottle brush to get residual from under & around buttons)
- Rinse & wipe dry with a clean cloth. (rinse water should be cold)
- Press each button to flush out any residual sanitising solution into a cup or drain
- Clean the drip tray with a sanitiser solution, removing any build up of syrup in the tray.

**DO NOT** remove buttons, button plates or heel. This is a pressurized system and should only be dealt with by a trained technician.

This is only a guide. Please consult with the soda gun manufacturer who may have their own recommended methods for cleaning their brand of soda gun.
